

Custom Safes

Proudly Made in the U.S.A.

Can't find what you need in our regular product lines?

Chances are, we can make it for you. Using our 45+ years of experience building customs of just about every size and shape, we've got what it takes to build what you need.

Please be aware that any custom safe requires a quote submitted by an Authorized Dealer, a rough sketch that includes (at minimum) the dimensions, lock types and steel thickness.

Custom depository safes are by far the most common type of custom safe we do. Of these, the rear load depository is the most popular. These safes can be made in almost any size with a chute designed to fit through almost any wall.

Our Custom Steel safes represent just about everything that is NOT a Depository Safe. We've done everything from oversize E-Rate safes (*1 inch thick steel body w/ 1.5 inch thick steel door*) to small locker sets.

We can create inner lockers, drawers, just about any configuration of shelves, etc., in just about any size safe.

Custom Interiors

It is hard to make a great product better, but by adding a custom interior to a MagnaVault or DynaVault safe, you can take an already premium quality product and add elegance and convenience to it.

Each custom interior is hand-crafted individually to your exact specifications giving you exactly what you need in an exceptionally attractive package.
